It seems like there is some corrupted or missing text. However, based on the given information, I'll try to organize and correct it.

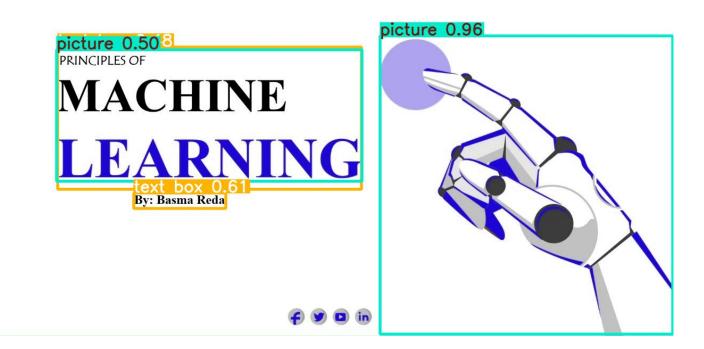

The corrected version appears to be:

PRINCIPLES OF MACHINE LEARNING

A box, 0. ?????

If you could provide more context or information, I'd be happy to help further.

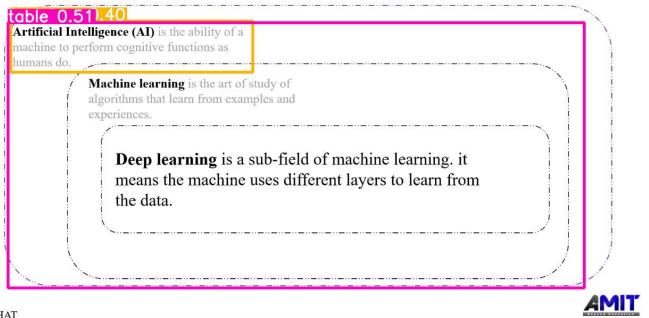

Deep learning is a subfield of machine learning. It means the machine uses different layers to learn from the data.

To break it down:

- * Deep learning is a subset of machine learning, which is a broader field of study.
- * In deep learning, machines use multiple layers (or "deep" layers) to process and learn from data.
- * This layered approach allows machines to analyze complex patterns and relationships within the data, enabling them to make accurate predictions or decisions.

Is there anything specific you'd like to know about deep learning or machine learning?

Machine learning has become increasingly popular due to several factors. Some of the key reasons include:

- * Much more affordable data storage solutions, which have helped make big data sets available to more organizations and for a much wider variety of applications.
- * Processing power is now faster than ever before.

It appears that "AMIT" may be a name or an acronym that is not relevant to the context of the question. If you could provide more information about "AMIT", I may be able to help you better. However, based on the provided text, the above organization and correction seem to be the most suitable.

Title: Why Machine Learning? (0.85)

These developments set the scene for machine learning to produce much better results than it was historically capable of providing, allowing machine learning applications to provide value to virtually every industry and business activity.

Footer: AMIT (0.47)

text box 0.84

These developments set the scene for machine learning to produce much better results than it was historically capable of providing, allowing machine learning applications to provide value to virtually every industry and business activity.
